### DETAILED ACTION

The Final Rejection paper numbered 32 is withdrawn and the following rejecting substituted.

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 12, 20, 21, 22, 24, 26, 27, 28, 31, 33-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Pfeiffer.

The patent to Pfeiffer shows an insect bait station for attracting and killing an insect having a body with an external surface, the body (not labeled) having at least one external longitudinal groove 17 for supporting a self-adhering oral insecticide in Figs. 1-2 and 17a in Figs. 8-9. The groove can be considered as longitudinal since it extends along the longitudinal axis of the body. The groove has a vertical length. See page 1, lines 72-104. In reference to claim 12, Pfeiffer shows a hanger member 16', 24 in Fig. 9. In reference to claim 20, Pfeiffer shows a pest attractant reservoir 15 or 15a connected to the body. In reference to claim 21, Pfeiffer shows a body with a top portion and a bottom portion with the pest attractant reservoir 15 affixed to the bottom portion. In reference to claim 22, Pfeiffer shows the pest attractant reservoir affixed to

the hanger member. In reference to claim 24, Pfeiffer disclose any suitable insecticide may be used in lines 89-90 on page 1, which encompasses a feeding attractant. In reference to claims 26 and 34, Pfeiffer discloses flies or *Musca domestica*.

3. Claims 1, 15-19, 20-21, 24, 26, 31, 33-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Foster et al. '985.

The patent to Foster '985 shows a bait station having a body 12, 13 with an external surface and one external longitudinal groove for supporting a self-adhering oral insecticide TNMT. The water in fluid reservoir 19 acts as an attractant and feeding stimulant for the target species.

4. Claims 1-4, 7-8, 15-19, 25, 26, 27, 29, 31, 33-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Foster '977.

The patent to Foster '977 shows an insect bait station for attracting and killing insects having a cylindrical body 2, an external groove in grill 5 between vertical wires that make up the grill) for supporting a self-adhering oral insecticide TNMT. Foster shows a cylindrical sheath 1. Foster shows the body 2 having an external surface orientated generally vertical surface 3.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6.

7. Claims 1, 12, 26, 27, 31, 33-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pfeiffer in view of Foster et al ' 985 for substantially the same reasons stated in paper numbered 32.

8. Claims 2-4, 7-10, 13-25, 28-30, 32, 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pfeifer in view of Foster '985 as applied to claim1 above, and further in view of Conlee for substantially the same reasons stated in paper numbered 32.
